上海喜元阀门制造有限公司

管道补偿产品专业制造商

公司简介

COMPANY PROFILE

上海喜元阀门制造有限公司是一家专业研发、制造及销售各类管道补偿接头及阀门类为一体的现代化企业，公司坐落在上海市奉贤区。

我公司拥有先进的加工设备和完善的制作技术，具有研制和生产各种管道设备的加工制造能力。在石油、化工、建筑、热力、供排水等行业取得了很好的业绩，获得了良好的口碑，随着企业的不断发展，同时与国内知名泵阀企业的深度合作，深刻意识到只有努力提高卓越的产品质量，提升先进的技术水平，完善良好的服务态度，才是制造企业的立身之本。

产品主要分为五大系列：阀门系列，橡胶接头减震器系列，不锈钢波纹管系列，钢制伸缩接头系列，预埋用防水套管系列等。给管道泵房水表阀门的安装连接和维修提供了极大的方便，给长距离管道因气候温差引起的伸缩位移，起到了极好的补偿、缓解和保护作用。

上海·喜元阀门一切本着用最短的时间解决客户所遇到的问题为目标立足市场；为新老客户提供更新更好的产品和服务，为客户创造价值。

Shanghai Xiyuan Valve Manufacturing Co., Ltd. is a professional R & D, manufacturing and sales of all kinds of pipeline compensation joints and valves as one of the modern enterprises, the company is located in Fengxian District, Shanghai.

Our company has advanced processing equipment and perfect production technology, and has the processing and manufacturing ability to develop and produce various pipeline equipment. In the petroleum, chemical, construction, heating, water supply and drainage industries have achieved good performance and good reputation. With the continuous development of the enterprise, at the same time, with the deep cooperation with domestic well-known pump and valve enterprises, we deeply realize that only strive to improve the excellent product quality, improve the advanced technical level, and improve the good service attitude are the foundation of the manufacturing enterprise.

The products are mainly divided into five series: valve series, rubber joint shock absorber series, stainless steel bellows series, steel expansion joint series, embedded waterproof casing series, etc. It provides great convenience for the installation, connection and maintenance of the water meter valve in the pipeline pump room, and plays an excellent role in compensation, mitigation and protection for the expansion and contraction displacement of long-distance pipeline caused by climate temperature difference.

Xiyuan valve all in line with the shortest time to solve the problems encountered by customers as the goal, based on the market; to provide new and old customers with better products and services, to create value for customers.

目录 CONTENTS

企业文化 • CORPORATE CULTURE

公司宗旨 Purpose of the company

以人为本，诚信务实，创新进取，回报社会。

People oriented, honest and pragmatic, innovative and enterprising, repay the society.

质量宗旨 Quality purpose

以最卓越的高品质阀门伸缩节和最完善补偿方案来保护管道，满足客户对产品的最终需求。

With the most excellent high quality valve expansion joint and the most perfect compensation scheme to protect the pipeline, to meet the final needs of customers for products.

营销战略 Marketing strategy

品种独特、质量优良、价格适中、交货及时、策略灵活、服务优质。

Unique variety, excellent quality, moderate price, timely delivery, flexible strategy and high quality service.

经营理念 management idea

不忘初心、诚信经营、业精于专、精诚致远。

Do not forget the original intention, integrity management, industry expertise, sincere Zhiyuan.

可曲挠橡胶接头 Flexible rubber joint

产品特性

可曲挠橡胶接头又可称为：橡胶软连接、软接头、柔性橡胶接头、橡胶膨胀节、避震喉、减震器等，是一种高弹性、高气密性、耐介质和耐气候性的管道接头。它的性能特点：1、体积小、重量轻、弹性好、安装维修方便。2、安装时可吸收管道震动产生的横向、轴向、角向位移；不受管道同心心，法兰不平行的限制。3、工作时可降低管道水泵等震动产生的噪音，吸振能力强。4、我们自主研发的内无缝高压橡胶接头，在耐高温、耐酸碱、耐油的管道中更有效地防止了腐蚀性介质对橡胶接头内壁的侵蚀，提高了使用寿命。

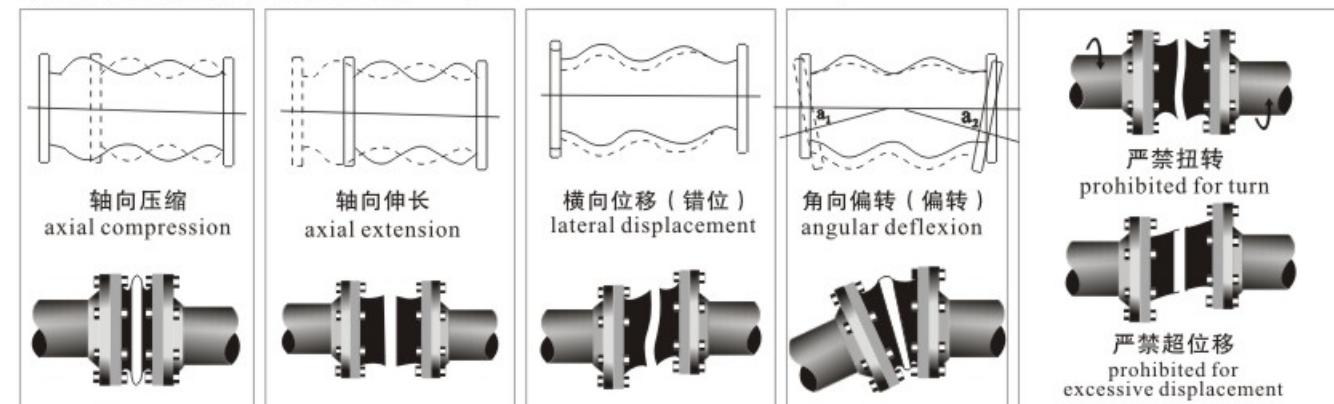

Product characteristics

The flexible rubber joint is also called rubber expansion joint, shock absorbing throat, shock absorber, it is a pipe joint with high air tightness, medium resistance and weather resistance. Its performance characteristics: 1, Small size, light weight, good elasticity, easy installation and maintenance. 2, Absorb the lateral, axial and angular displacement from the vibration of the pipeline, and the utility is not restricted by the concentricity of the pipeline, and the flange. 3, Reduce the pipeline pump vibration noise and vibration absorbing ability. 4, Our independent research and development of seamless high pressure rubber joints used in the high temperature, acid and alkali resistant, oil resistant pipeline are more effectively to prevent corrosion of the inner wall of the rubber joint, and the service life is prolonged.

注：1、特殊要求可按用户图纸制作，法兰标准采用GB/T9115.1-2000，可选配（GB、HG、ANSI、DIN、BS、EN、JIS等）法兰标准生产。橡胶球体可做天然橡胶、三元乙丙橡胶、氯丁橡胶、丁基橡胶、丁晴橡胶、氟橡胶等。

2、悬空给水使用DN200以上产品，管道必须有固定支撑或固定托架，否则产品应安装防拉脱装置。

3、用户使用橡胶接头，对应法兰应是阀门法兰或符合GB/T9115.1(RF)法兰。

Note: 1, special requirements can be made according to user drawings, flange standard GB/T9115.1-2000, optional (GB, HG, ANSI, DIN, BS, EN, JIS) standard production of flange. Rubber body to NR, EPDM, CR, IIR, NBR, VITON.etc

2, the use of suspended water supply above DN200, the pipe must be fixed or fixed support bracket, or pull off device shall be installed.

3, When using rubber joints, the corresponding flange should be the valve flange or GB/T9115.1(RF) flange.

限位可曲挠橡胶接头
Limited flexible rubber joint

产品特性

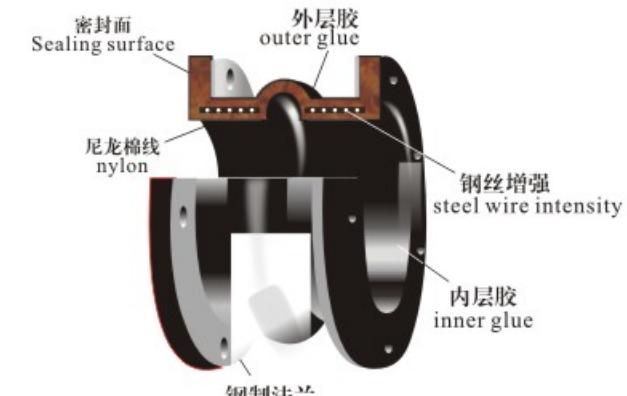

防拉脱装置也称限位防拉脱装置，是在原有产品性能的基础上增设限位装置，管道在允许的伸缩量中可以自由伸缩，一旦超过其最大伸缩量就起到限位，确保管道的安全运行，特别适用于有振动或有一定斜度及拐弯的管路中的连接。高层给水使用橡胶接头时，管道必须有固定支撑或固定托架，否则产品应安装防拉脱装置。

Product characteristics

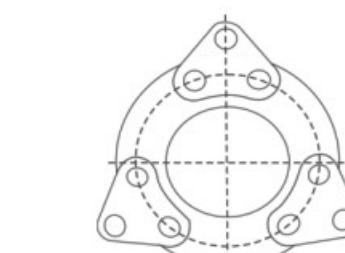

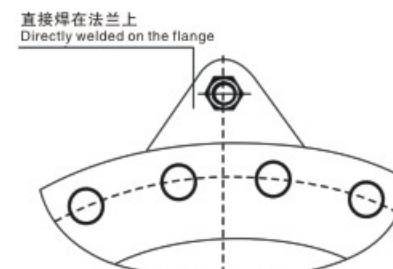

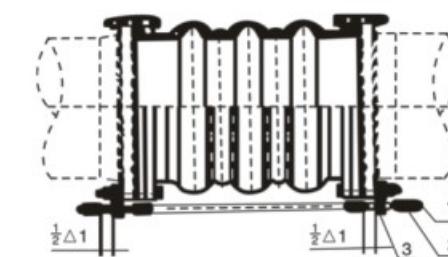

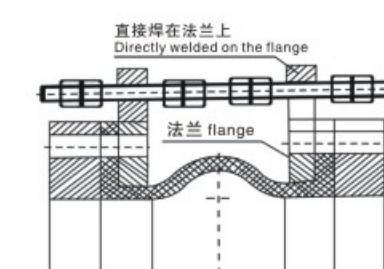

The escapement or limit the escapement, a limiting device is arranged in the original products in the pipeline to limit expansion amount allowed in the free expansion. once the expansion exceeds the maximum expansion amount, the expansion is stopped by the limit device ensuring the safe operation of the pipeline, and the utility is especially suitable for the connection of a pipeline with vibration or a certain inclination and turning. High water supply using rubber joints, The pipe must be fixed or fixed support bracket, otherwise the anti pull off device shall be installed.

橡胶隔振垫

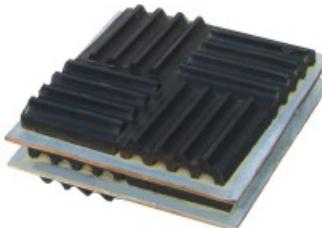

Rubber vibration isolation pad

产品介绍 Product introduce

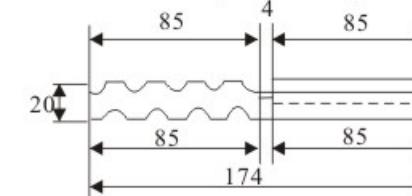

该厂生产的橡胶隔震垫种类繁多、规格齐全。便于裁切，组装灵活，可有效地抗压减震，适用于冲床，锻压机，泵、风机、压缩机、发电机，空调设备等震动设备震动大的机电设备减震安装。

主要尺寸（长×宽，单位：mm），85×42.5、85×85、131.5×85、174×85、220.5×85、263×85、174×174、263×174，每一尺寸又分40°、60°、80°三种规格，可适应不同垂向设计荷载。

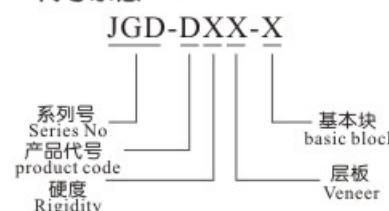

Being complete in specifications and of great variety, the rubber vibration isolators produced by our factory are convenient for cutting and flexible for assembling, and they can effectively resist compression and reduce vibration, applied for the vibration absorbing installation of electromechanical devices with serious vibration such as punching machine, forging press, pump, draught fan, compressor, electric generator and air conditioning unit and so on. Main dimension (Length × width, unit: mm), 85×42.5, 85×85, 131.5×85, 174×85, 220.5×85, 263×85, 174×174, 263×174, each is divided into three specifications: 400°, 600°, 800°, which get with different vertical design load.

橡胶剪切隔振器

Rubber shear isolator

D型橡胶剪切隔振器是由内、外钢套和中间的合成橡胶组成，经硫化呈中间圆锥体橡胶部分受剪切力，具有较大的变形范围和较低的固有频率。工作温度范围在-5~+50℃，温度变化时，刚度也有所变化；阻尼比C/C₀>0.07。对于水泵、压缩机、通风机、发电组、冷冻机等机械设备的积极隔振和仪器仪表的消极隔振，都有良好的隔振效果。

D1 type rubber cutting vibration isolator is composed of internal and external steel bushing and medial synthetic rubber, after vulcanization, it appears a core in the middle and the rubber part is stressed, and there are large deformation range and low free-running frequency. The working temperature range is -5°C~+50°C, as the temperature changes, the rigidity changes; damping ratio is C/C₀>0.07. It has good vibration isolating effect for the active vibration isolation of water pump, compressor, ventilator, generating set and refrigerating machine and the passive vibration isolation of instruments and meters.

可曲挠合成橡胶接头安装说明
Installation instructions for flexible rubber joints

- 一、可曲挠合成橡胶接头在安装时，严禁超位移极限安装。
 - 二、1.0MPa以上地面横向、悬空、垂直安装橡胶接头，管道两端应有固定支撑或固定托架，以防拉脱或破坏设施。
 - 三、固定支撑或固定托架的力，必须大于工作的轴向力，否则应安装防拉脱装置。
 - 四、安装可曲挠合成橡胶接头的对应法兰，应按标准GB/T9115.1 (RF) 法兰(即小口径法兰)，以防法兰D2、do尺寸过窄，出现密封面漏水。
 - 五、安装可曲挠合成橡胶接头法兰螺栓，要对称逐步加压拧紧，以防承压出现局部泄漏或破坏可曲挠合成橡胶接头的密封面。
 - 六、1.0MPa以上工作压力，垂直、悬空使用橡胶接头，安装螺栓要有弹垫，以防工作时螺栓松动，造成局部漏水，渗水。
 - 七、垂直安装，可曲挠合成橡胶接头应有固定支撑，严禁橡胶接头受重压。
1. When installing flexible synthetic rubber joints, it is strictly forbidden to install them beyond the limit of displacement.
 2. Rubber joints shall be installed horizontally, suspended and vertically on the ground above 1.0 Mpa. Fixed supports or brackets shall be provided at both ends of the pipeline to prevent pull-off or ring breakage.
 3. The force of fixed support or fixed bracket must be greater than the axial force of work, otherwise anti-pull-off device should be installed.
 4. Installation of flanges corresponding to flexible synthetic rubber joints shall be in accordance with standard GB/T9115.1 (RF) flanges (i.e. small-caliber flanges) in order to prevent flange D2, do size from being too narrow and leakage of sealing surface.
 5. Install flange bolts of flexible synthetic rubber joints, and tighten them symmetrically step by step to prevent local leakage of pressure or damage the sealing surface of flexible synthetic rubber joints.
 6. Over 1.0 MPa working pressure, rubber joints are used vertically and in suspension. Installation bolts should have cushions to prevent loosening of bolts, causing local leakage and water leakage.
 7. Vertical installation. Flexible synthetic rubber joints should be supported by fixed supports. Heavy pressure on rubber joints is strictly prohibited.

注明：请严格按照安装要求使用可曲挠橡胶接头，如果因为安装不当造成任何后果，工厂不承担责任。
 Note: Please use flexible rubber joints in strict accordance with the installation requirements, the factory is not responsible if there are any consequences due to improper installation.

橡胶接头理化数据 Physical and chemical data of rubber joints

一、抗疲劳系数(轴向往复1000次); ≥ 0.85 注:长度缩短20%

二、拉伸强度(MPa)内外胶平均 ≥ 12.5

三、热空气老化拉变率, 内外 $\pm 25\%$ (100Cx48h)扯变率 内外 $\pm 15\%$

四、耐酸系数10%H2SO4X168h 室温 ≥ 0.7

五、耐碱系数10%NaOHx168h 室温 ≥ 0.7

六、扯断伸长率(%) ≥ 450

1. Anti-fatigue coefficient (1000 axial reciprocating times); > 0.85 Note: Length shortened by 20%.

2. Tensile Strength (MPa) Average of Inside and Outside Adhesives (> 12.5)

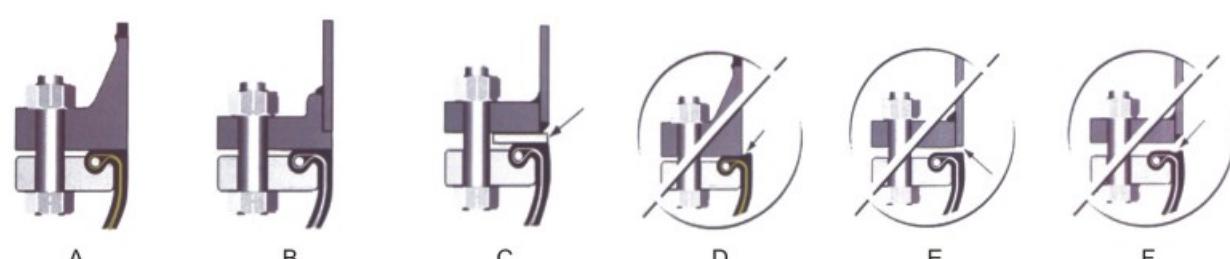

3. Tensile strain rate of hot air aging, internal and external (+25%) (100Cx48h) and internal and external (+15%).

4. Acid resistance coefficient 10% H2SO4X168h room temperature (> 0.7)

5. Alkali Resistance Coefficient 10% NaOHx168h Room Temperature (> 0.7)

6. elongation at break (%) greater than 450

请选择正确的法兰 Please choose the right flange

A.采用正确的配套法兰防止损坏橡胶密封封面

B.正确采用的焊颈法兰防止损坏橡胶密封面

C.采用大口内径平焊法兰时应安装一个小口径金属垫片可以防止损坏橡胶

D.法兰不能与橡胶密封面完全密封, 冲洗橡胶

E.不平衡端管对橡胶密封面造成损坏

F.法兰内边缘损坏橡胶密封面

A. Uses the correct supporting flange to prevent damage to the rubber seal cover

B. Correctly use welding neck flange to prevent damage to rubber seal surface

C. Big diameter flange should be installed on a small caliber metal gasket to prevent damage of rubber

D. Flange can not be completely sealed with rubber seal surface, rinse rubber

E. Uneven pipe end damage to rubber sealing surface

F. Damage of rubber sealing surface at the inner edge of flange

波纹补偿器(膨胀节)的有关技术参数、技术条件 Relevant technical parameters and conditions of corrugated compensator (expansion joint)

一、样本系列产品的挠性元件——不锈钢波纹管

波纹管材料主要为奥氏体型不锈钢 (OCr19Ni9, 1Cr18Ni9Ti, SUS316L(00Cr17Ni14Mo2)、SUS316 (Ocr17/Ni12Mo2) .也可根据用户需要采用其它金属材料制造。当接管或法兰材料为碳钢时, 产品工作温度范围为-20°C ~ 400°C。当接管或法兰材料为不锈钢时, 产品工作温度范围为-250°C ~ 600°C。

Flexible Components of Sample Series Products—Stainless Steel Bellows

Bellows are mainly made of austenitic stainless steel (OCr19Ni9, 1Cr18Ni9Ti, SUS316L (00Cr17Ni14Mo2), SUS316 (Ocr17/Ni12Mo2)). Other metal materials can also be used according to user's needs. When the material of nozzle or flange is carbon steel, the working temperature range of the product is -20 ~ 400 C. When the material of nozzle or flange is stainless steel, the working temperature range is -250 ~ 600 C.

二、补偿量、刚度在温度变化时的修正

样本所列产品各技术参数均为在20°C的条件下计算得出的, 若补偿器实际使用温度大于或小于20°C时, 表一、表二提供的系数, 补偿量X₀、Y₀、O₀、及刚度k进行修正, 以确定补偿器的实际补偿量和刚度。

Correction of Compensation Quantity and Stiffness with Temperature Change

The technical parameters of the products listed in the sample are calculated at 20 °C. If the actual temperature of the compensator is greater than or less than 20 °C, the coefficients provided in Table 1 and Table 2, the compensation amount X_{theta}, Y_{theta}, O_{theta}, and stiffness K are revised to determine the actual compensation amount and stiffness of the compensator.

温度补偿量的修正系数F1 (表一)

Correction factor f1 of temperature compensation (table 1)

温度°C	-200	-150	-100	-50	20	50	100	150	200	300	350	400
F1	0.932	0.924	0.956	0.979	1	1.001	1.002	1.003	1.004	1.025	1.047	1.072

温度补偿量的修正系数F2 (表二)

Correction factor f2 of temperature compensation (table 2)

温度°C	-200	-150	-100	-50	20	50	100	150	200	300	350	400
F1	1.071	1.055	1.045	1.028	1	0.992	0.971	0.956	0.937	0.901	0.88	0.86

注: 若温度值在两数之间, 系数F1、F2按插入法选取

Note: If the temperature is between two numbers, the coefficients F1 and F2 are selected by insertion method.

例1. 求N=15000次 t=300°C时

2.5JDZ250×6—J轴向型内压式补偿器的轴向补偿量和刚度。

查样本: 轴向补偿量X₀=60rmm

轴向刚度K_x=113N/mm

经修正: X_θ'=f₁·X₀=1.025×60=61.5mm

K_x'=f₂·K_x=0.901×113=101.8N/mm

例2. 求N=15000次 t=300°C时2.5BDh250-F-000大拉杆

横向型补偿器横向补偿量及横向刚度。

查样本: 轴向补偿量Y₀=367mm

轴向刚度Ky=2.4N/mm

经修正: Y_θ'=f₁·Y₀=1.025×367=376.18mm

Ky'=f₂·Ky=0.901×2.4=2.16N/mm

三、疲劳破坏次数, 安全寿命与补偿量

为方便用户合理选择产品, 样本中列出补偿器在几种疲劳破坏次数下的补偿量.如通用型、轴向型补偿器、有疲劳破坏次数N为1500次、15000次、45000次时的补偿量; 拉杆横向型补偿器、铰链式补偿器、直管压力平衡式补偿器有疲劳破坏次数N为15000次时的补偿量; 曲管压力平衡式补偿器有疲劳破坏次数N为45000次时的补偿量; 矩型轴向补偿器有1500次、3000次时的补偿量。用户可根据所需产品工作环境与使用寿命来选择不同疲劳次数下的补偿量。

Number of Fatigue Damages, Safety Life and Compensation Quantity

In order to facilitate users to choose products reasonably, the compensation amount of compensators under several times of fatigue damage is listed in the sample. For example, general type, axial type compensators and times of fatigue damage N are as follows. Compensation amount for 1500, 15000 and 45000 times; Fatigue damage times for horizontal tension rod compensator, hinge compensator and straight pipe pressure balancing compensator are 15 000 timesThe compensating amount of the moment-type axial compensator is 1500 times and 3000 times when the number of fatigue failure is 45 000 times for the crankshaft pressure balancing compensator, and the compensating amount of the moment-type axial compensator is 1500 times and 3000 times for the moment-type axial compensator. user The compensation amount under different fatigue times can be selected according to the working environment and service life of the product.

疲劳破坏次数是根据波纹管的结构参数.压力值和补偿量, 通过计算和试验而得。由于波纹管的疲劳问题是一个比较复杂的问题.其数据的覆盖面较大, 因此国家有关标准规定在确定补偿使用疲劳寿命【N】时, 其安全系数一般分为四种:

(1) 对于易燃、易爆、剧腐、剧毒之类容器及大型换热器等设备所用波纹补偿器, 取 ≥ 15 。

(2) 对于工业生产及人民生活必需的水、电、气三线所用波纹补偿器, 取 ≥ 10 。

(3) 对于大位移、少循环、直通热源的主蒸汽管道及常通、长输埋地管道之类用波纹补偿器, 取 ≥ 5 。

(4) 对于设备中吸收机械振动或其它专门场合使用的波纹补偿器, 取 ≥ 2 。

The number of fatigue failure is calculated and tested according to the structural parameters, pressure and compensation of bellows. Because the fatigue problem of bellows is a complicated problem. The data coverage is large, the safety factor of bellows is generally divided into four categories when determining the compensatory service life [N]:

(1) For the corrugated compensators used in inflammable, explosive, highly rotten and poisonous containers, large heat exchangers and other equipment, take 15.

- (2) For the ripple compensator used in industrial production and people's daily life, take 10.
 (3) For the main steam pipeline with large displacement, less circulation and direct heat source, as well as the buried pipeline with normal and long distance transportation, the corrugated compensator should be more than 5.
 (4) For the ripple compensator used in equipment to absorb mechanical vibration or other special occasions, take

本样本中所列产品均以15倍的安全系数代入计算而得的波纹管的疲劳破坏寿命次数N。

即: $N = N/15$

N - 许用疲劳寿命次数

N - 疲劳破坏次数

若用户实际选用的疲劳次数与样本所列的疲劳次数不符时, 可按表三、表四的系数进行修正:

无铠装环的补偿器疲劳破坏次数对补偿量的修正数F3 (表三)

The correction number f3 of fatigue damage number of compensators without armored rings to compensation quantity (table 3)

N(次)	2250	4500	7500	9000	10500	12000	15000	30000	60000
F3	1.525	1.33	1.18	1.125	1.085	1.05	1	0.87	0.745

带铠装环的补偿器疲劳破坏次数对补偿量的修正数F3' (表四)

The correction number f3' (table 4) of fatigue damage number of compensators with armored rings to compensation quantity

N(次)	2250	4500	7500	9000	10500	12000	15000	30000	60000
F3'	1.825	1.48	1.28	1.13	1.85	1.03	1	0.805	0.64

注: 若值在两数之间, 系数按内插入法选取。

例3

求2.5BJZ250×6—F轴向型内压式波纹补偿器N=4500次时的轴向补偿量

查样本: N=15000次时 $X_0=60\text{mm}$

经修正: N=4500次时 $f3=1.33$ $X_0=f3 \cdot X_0=1.33 \times 60=79.8\text{mm}$ 即为N在4500次时, X_0 可以达到79.8mm.

四、工作压力、管道位移同时不等量变化时对补偿器许多寿命的影响。

波纹补偿器的许多寿命与其工作压力、管道的位移量有很大关系。在实际工作压力 P' 与额定工作压力 P' (P'/P) 为100%时和实际管道位移 $\Delta L'$ 与额定管道位移 ΔL 的比值为100%时, 使用寿命为修正后的实际使用疲劳寿命次数, (设1000次)。若 $P'/P=100\%$ 时, 而 $\Delta L'/\Delta L=50\%$, 则许多寿命即为21500次, 详见表五。

The service life of corrugated compensator is closely related to its working pressure and displacement of pipeline. When the actual working pressure P' and rated working pressure P' (P'/P) are 100% and the ratio of actual pipe displacement L' to rated pipe displacement L is 100%, the service life is the number of actual service fatigue life (set up 1000 times). If $P'/P = 100\%$. And $L'/L = 50\%$. Many life cycles are 2,1500, as shown in Table 5.

工作压力、管道位移变化时补偿器的疲劳寿命次 (表五)

Fatigue life of compensator when working pressure and pipe displacement change (Table 5)

位移变化 $\Delta L'/\Delta L \times 100\%$	工作压力变化 $P'/P \times 100\%$ Change of working pressure $P'/P \times 100\%$						
	100	80	60	50	40	20	0
120	480	500	530	550	570	600	650
110	680	740	780	830	900	1000	1100

五、位移量的合成

该样本诸系列表中给出的轴向补偿量 X_0 , 横向补偿量 Y_0 和角向位移 θ_0 , 是各种型式补偿器的额定位移量, 也是单独实施该类位移的最大位移范围值, 若该补偿器要进行两种或两种以上的位移, 则补偿量的选取要符合下列关系式:

$$\frac{X_1}{X_0} + \frac{Y_1}{Y_0} + \frac{\theta_1}{\theta_0} \leq 1$$

X_0 、 Y_0 、 θ_0 为某一疲劳破坏次数下单独进行轴向、横向和角向补偿时的相应补偿量 (由样本中查出并修正得到)。

Y_1 、 y_1 、 θ_1 为该疲劳破坏次数下同时存在的轴向、横向和角向补偿量的实际值。

六、内导流筒的选择

内导流筒可以减少补偿器内流体介质的流动阻力和防止介质高速流动引起波纹管的诱发性振动。导流筒的设置一般满足下列要求:

(1) 系统要求流量损失小, 流动平稳及有粉尘的场合。

(2) 介质为气体时: $DN \leq 150\text{mm}$ $V \geq 0.05\text{m/s}$ $DN > 150\text{mm}$ $V > 8\text{m/s}$

介质为液体时: $DN \leq 150\text{mm}$ $V \geq 0.02\text{m/s}$ $DN > 150\text{mm}$ $V > 3\text{m/s}$

式中: DN : 公称通径 (mm), V : 介质流速 (m/s)

但内导流筒的存在对补偿器的横向和角向位移的补偿量有较大的影响, 选用时应予以考虑。

The inner draft tube can reduce the flow resistance of the fluid medium in the compensator and prevent the induced vibration of the bellows caused by the high-speed flow of the medium. The installation of the draft tube generally meets the following requirements:

(1) The system requires small flow loss, stable flow and dust.

(2) When the medium is gas: $DN \leq 150\text{mm}$ $V > 0.05\text{m/s}$ $DN > 150\text{mm}$ $V > 8\text{m/s}$

When the medium is liquid: $DN \leq 150\text{mm}$ $V < 0.02\text{m/s}$ $DN > 150\text{mm}$ $V > 3\text{m/s}$

Formula: DN : nominal diameter (mm), V : medium velocity (m/s)

However, the existence of inner draft tube has great influence on the compensation of lateral and angular displacement of compensator, which should be considered when selecting.

七、补偿器的预变形

为使补偿器处于一个良好的工作位置和减少管架受力, 可以对补偿器在安装前进行“预变形”。

轴向补偿器的轴向预变形量 ΔX 由下式确定: $\Delta X = X \left(\frac{1}{2} - \frac{T_{min} - T_{max}}{T_{max} - T_{min}} \right)$

式中: X : 向补偿量mm T_0 : 安装温度°C T_{min} : 最高使用温度°C T_{max} : 最低使用温度°C

ΔX 为正值时, 表示“预拉”; ΔX 为负值时, 表示“预压”。 “预变形”是由系统设计确定的, 若用户需要, 只要在合同上注明变形量, 我厂可按“预变形”长度交货。轴向补偿器和角向补偿器的冷紧量可取实际补偿量的一半, 即 $1/2$ 或 $1/4$ 。“预变形”是反向“冷紧”, 横向补偿量大时需要进行“冷紧”, 横向补偿量较小时, 可不进行冷紧。

附件 (一) : 典型管线分段与补偿器的选型

工程管路系统的设计, 由于受各方面的制约是相当复杂的, 但是任何复杂的管系都可以通过固定管架的配置, 分成若干形状的相对简单的单独管段, 如: 一字型L、U、Ω型管段。再根据这些相对简单的管段来确定管系的变形位移, 选择合适的波纹补偿器。

波纹补偿器的种类很多, 正确选型十分重要, 管系设计在走向, 支撑固定管架、导向管架等设计的同时, 要综合考虑补偿器的类型和配置, 才能保证管系的设计安全、可靠、经济、合理。

以波纹管为核心的挠性元件补偿器, 在管线上作轴向、横向和角向三方向的补偿, 内压轴向型和通用型补偿器从性能上看, 可以同时作三个方向补偿, 但因有时加配内导流筒, 因此受到内导流筒等附件的限制, 往往也只能单一轴向位移。因此, 用户在选用及订货时需注明清楚, 以便正确选用和按需供货。

本系列产品中, 轴向型补偿器用以吸收管路轴向位移, 大拉杆横向补偿器吸收垂直于补偿器的轴线的横向位移, 小拉杆横向型补偿器适合横向位移, 也可以吸收轴向、角向和任意三个位移的组合, 铰链补偿器以两个或三个配套使用, 用以吸收单平面一个方向或多个方向的横向位移, 万向铰链补偿器配套使用, 可以在多平面中吸收位移。

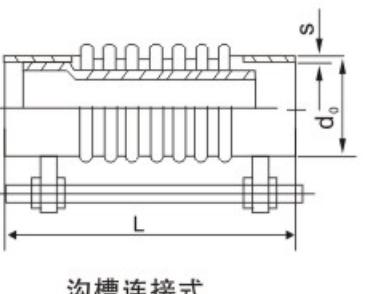

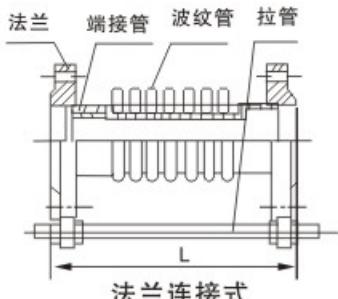

The design of engineering pipeline system is quite complicated due to various constraints. However, any complex pipeline system can be divided into several relatively simple individual sections through the configuration of fixed pipe racks, such as L, U and Ω sections. Then, according to these relatively simple sections, the deformation displacement of the pipeline system is determined, and the appropriate corrugation compensator is selected.

Correct selection of corrugated compensators is very important. Pipeline design should take into account the type and configuration of compensators while moving towards supporting the design of fixed pipe rack and guide pipe rack. Only in this way can the design of piping system be safe, reliable, economical and reasonable.

The flexible component compensator with bellows as its core can compensate in three directions: axial, transverse and angular. Internal pressure axial compensator and general compensator can compensate in three directions at the same time from the performance point of view. But sometimes they are equipped with internal draft tube, so they are limited by accessories such as internal draft tube. Often they can only displace in a single axis. Therefore, users need to specify clearly when choosing and ordering. In order to select correctly and supply on demand.

In this series of products, the axial compensator is used to absorb the axial displacement of the pipeline. The large pull rod transverse compensator absorbs the transverse displacement perpendicular to the axis of the compensator. The small pull rod transverse compensator is suitable for transverse displacement. It can also absorb the combination of axial, angular and arbitrary three displacements. The hinge compensator is used in two or three matching sets to absorb one or more directions of a single plane. Transverse displacement, universal hinge compensator matching use, can absorb displacement in multi-plane.

不锈钢波纹补偿器 Stainless steel corrugated compensator

设计温度: -20°C ~ +400°C

位移方向: 轴向 (少量横向、角向)

设计压力: 0.25Mpa~2.5Mpa

通径: DN32-DN7000mm

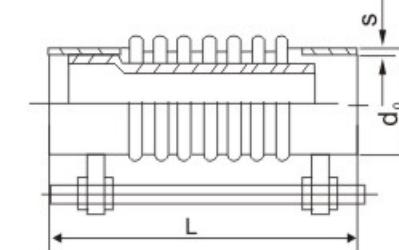

型号标注: JDZ

该补偿器由一个波纹管和两个端接头构成，它通过波纹管的柔性变形来吸收管线的轴向位移，其中接管的两端与管道相连，固定螺柱是保证补偿器在运输过程中波纹管的刚性支撑。

沟槽金属软管/波纹管 Grooved metal hose / bellows

设计温度: -20°C ~ +400°C

设计压力: 0.25Mpa ~ 2.5Mpa

位移方向: 轴向 (少量横向、角向)

通径: DN32-DN350mm

沟槽波纹管 (grooved fittings) 是一种新型的钢管连接补偿器，具有很多优点。管道沟槽连接技术兴起于20世纪50年代的美国，90年代末引入中国。此后，以其安装便捷、质量可靠、经济环保等突出优点，迅速被国内市场所接受和推广。在国家法规政策的积极引导下，目前该技术已广泛应用于消防给水、生活给水、中央空调、污水处理、石油化工、热电及军工等多个领域，并逐步取代法兰和焊接这两种传统的管道连接方式，成为气、液管道连接的首选技术。虽然管道沟槽连接技术推广应用了较长时间，但由于相关人员的认识不足、缺乏经验、疏于管理等多方面原因，导致管件松脱、接头渗水等质量通病多有发生。本文将从材料选择、安装工艺、支(吊)架设置等角度，分析管道沟槽连接质量问题的产生原因，并就确保管道沟槽连接质量提出见解与体会。

Grooved fittings is a new type of steel pipe connection compensator, which has many advantages. Pipeline groove connection technology rose in the United States in the 1950s and was introduced into China in the late 1990s. Since then, it has been rapidly accepted and promoted by the domestic market for its advantages of convenient installation, reliable quality, economy and environmental protection. Under the active guidance of national laws and policies, this technology has been widely used in many fields, such as fire water supply, domestic water supply, central air conditioning, sewage treatment, petrochemical industry, thermoelectricity and military industry. It has gradually replaced flange and welding as two traditional pipeline connection methods, and has become the first technology for gas-liquid pipeline connection. Although pipeline groove connection technology has been widely used for a long time, due to lack of knowledge, experience and negligence in management and other reasons, pipe parts loosening, joint seepage and other common quality defects often occur. This paper will analyze the causes of the quality problems of pipe groove connection from the angles of material selection, installation technology and support (suspension) frame setting, and put forward opinions and experiences on ensuring the quality of pipe groove connection.

沟槽波纹管连接的优点

1、操作简单

沟槽管件的连接操作是非常简易的，无需特殊的专业技能，普通工人经过简单的培训即可操作。这是因为产品已将大量的精细的技术部分以工厂化方式溶入到了产品中。一处管件连接仅需几分钟时间，最大限度的简化了现场操作的技术难度，节省工时，从而也稳定了工程质量，提高了工作效率。这也是安装技术发展的总体方向。

而传统的焊接和法兰连接的管道连接方式，不但需要有相应技能的焊接工人，而且费时，工人的操作难度大，并存在焊接烟尘的污染。由于操作空间和焊接技能的差异，焊接质量和外观都难以达到满意的结果，从而影响工程的整体质量。

另外，由于沟槽管件为成品件，现场需要的操作空间小，可真正的实现靠墙靠角安装，操作难度大为减小，从而节省了占地面积，美化了管道安装的效果。

2、管道原有的特性不受影响

沟槽管件连接，仅在被连接管道外表面用滚槽机挤压出一个沟槽，而不破坏管道内壁结构，这是沟槽管件连接特有的技术优点。如果采用传统的焊接操作，许多内壁做过防腐层的管道都将遭到破坏。因此规范规定镀锌管道，衬塑钢管、钢塑复合管等不得使用焊接和法兰连接，否则需要二次处理。

3、有利于施工安全

采用沟槽管件连接技术，现场仅需要切割机、滚槽机和扭紧螺栓用的扳手，施工组织方便。而采用焊接和法兰连接，则需要配备复杂的电源电缆、切割机具、焊接机及氧气和乙炔气瓶等，这就给施工组织带来了复杂性，且也存在着漏电和火灾的危险隐患。同时焊接和气割所产生的焊渣，不可避免的落入管道内部，使用中容易产生管路阀门甚至设备堵塞，也污染管内水质。

另外，焊接和法兰连接不可避免需要长时间的高空作业，也容易发生生产安全事故。

4、系统稳定性好，维修方便

沟槽管件连接方式具有独特的柔性特点，使管路具有抗震动、抗收缩和膨胀的能力，与焊接和法兰连接相比，管路系统的稳定性增加，更适合温度的变化，从而保护了管路阀门，也减少了管道应力对结构件的破坏。

由于沟槽管件连接操作简单，所需要的操作空间变小，这为日后的维修带来了许多方便条件。当管道需要维修和更换时，只需松开两片卡箍即可任意更换、转动、修改一段管路。不需破坏周围墙体，减少了维修时间和维修费用。

5、经济分析

沟槽管件连接操作简单，省工省时，因此具有良好的经济效益。许多文章都做过经济分析，认为“采用卡箍连接，虽然卡箍的单个配件价格较高，但整个管网安装的综合效益高于法兰连接”。文章在对比时都将法兰连接按二次镀锌处理（按规范要求这也是必须要做的）。

沟槽管件适用范围

沟槽管件连接作为一种先进的管道连接方式，即可以明设也可以埋设，即有钢性接头，也有柔性接头。因此具有广泛的适用范围。

①按系统分：可用于消防水系统、空调冷热水系统、给水系统、石油化工管道系统、热电及军工管道系统、污水处理管道系统等；

②按管道材质分：可用于连接钢管、铜管、不锈钢管、衬塑钢管、球墨铸铁管、厚壁塑料管及带有钢管接头和法兰接头的软管和阀件。

不锈钢金属软管 Stainless steel metal hose

JR 不锈钢金属软管（简称软管）是现代工业管路中的一种高品质的柔性管道。它主要由波纹管、网套和接头组成。它的内管是具有螺旋形或环形的薄壁不锈钢波纹管。波纹管外层的网套，是由不锈钢丝或钢带按一定的参数编织而成。软管两端的接头或法兰是与客户管道的接头或法兰相配的。

波纹金属软管具有了良好的柔韧性、抗疲劳性、耐高温、耐高低温、耐腐蚀性等诸多特性，它相对其它软管（橡胶、塑料软管）的寿命就要高出许多，故它又具有较高的综合经济效益，随着现代工业的发展，对耐高温、耐高压的波纹金属软管的需要量亦愈来愈大。

软管使用范围：需要充分挠性的输送管，防止振动处所配管，对蒸汽、煤气、空气、重油、石油、化工药品类均使用。

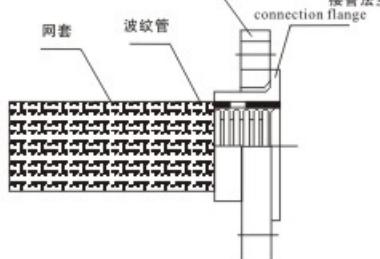

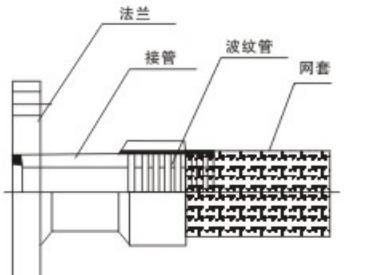

JR stainless steel metal hose (referred to as hose) is a high-quality flexible pipe in modern industrial pipelines. It mainly consists of bellows, net sleeves and joints. Its inner tube is a thin-walled stainless steel bellows with spiral or annular shape. The net sleeve of the outer layer of bellows is made of stainless steel wire or strip according to certain parameters. The joints at both ends of the hose are compatible with the joints or flanges of the customer's pipelines.

Corrugated metal hose has many characteristics such as good softness, fatigue resistance, high and low temperature resistance, corrosion resistance and so on. Compared with other hoses (rubber and plastic hoses), its life is much longer. Therefore, it has higher comprehensive economic benefits. With the development of modern industry, the demand for corrugated metal hoses with high temperature and high pressure resistance is also increasing.

Hose scope of use: Fully flexible conveyor pipes are needed to prevent vibration in place piping, steam, gas, air, heavy oil, petroleum, chemical drugs are used.

设计温度：-20℃ ~ +400℃

四氟波纹补偿器 Tetrafluoro ripple compensator

四氟补偿器

- 可耐各种浓度酸、碱、盐。又兼有不锈钢补偿器的压力不怕碰撞等优点
- 可提供：DN25~1600mm
- 压力等级：PN0.6、1.0、1.6MPa
- 连续疲劳寿命：1000次
- 使用温度：≤200℃

中压网套高颈四氟补偿器

- 替补管道与管道中间相隔距离太大，以代替波数太多的补偿器，减少厂家成本费。
- 可提供：DN25~1600mm补偿器
- 压力等级：PN0.25~2.5MPa
- 疲劳次数：≥10000次
- 使用温度：≤220℃

Tetrafluoride compensator

- It can withstand various concentrations of acid, alkali and salt, and has the advantages of stainless steel compensator pressure not afraid of collision, etc.
 - Provided: DN25~1600mm
 - Pressure grade: PN0.6, 1.0, 1.6 Mpa
 - Continuous fatigue life: 1000 times
 - Temperature: <200
- Medium voltage mesh sleeve high neck tetrafluoro compensator**
- The distance between the replacement pipeline and the pipeline is too large to replace the compensator with too many wave numbers and reduce the cost of the manufacturer.
 - Provided: DN25~1600mm compensator
 - Pressure Grade: PN0.25~2.5MPa
 - Fatigue frequency: > 10000 times
 - Service Temperature: <220 Temperature

优点 Advantage

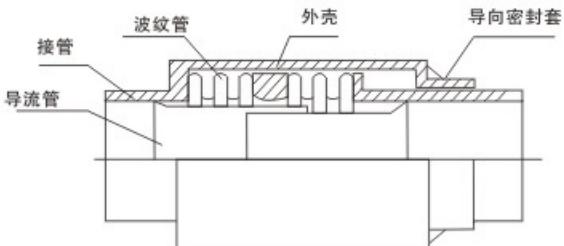

外体为不锈钢金属补偿器内衬PTFE。可耐各种浓度酸、碱、盐，又兼有不锈钢补偿器的压力，不怕碰撞等优点。
耐高温——使用工作温度达250℃。
耐低温——具有良好的机械韧性；即使温度下降到-196℃，也可保持5%的伸长率。
耐腐蚀——对大多数化学药品和溶剂，表现出惰性、能耐强酸强碱、水和各种有机溶剂。
耐气候——有塑料中最佳的老化寿命。
高润滑——是固体材料中摩擦系数最低者。
不粘附——是固体材料中最小的表面张力，不粘附任何物质。
无毒害——具有生理惰性，作为人工血管和脏器长期植入体内无不良反应。
电绝缘性——可以抵抗1500伏高压电。

直埋内压轴向型波纹补偿器

Directly buried axial corrugated compensator with internal pressure

【设计温度: -20°C ~ +400°C 设计压力: 0.25Mpa~2.5Mpa 位移方向: 轴向 (少量横向、角向) 通径: DN50-DN1000mm】

产品特点: Product characteristics

直埋内压式波纹补偿器, 适用于只有轴向位移的管路种, 本产品具有补偿横向位移和轴向与横向合成位移的能力, 但因为补偿量较小一般只做为轴向补偿更能发挥其特性, 使用寿命更长, 更加安全可靠。

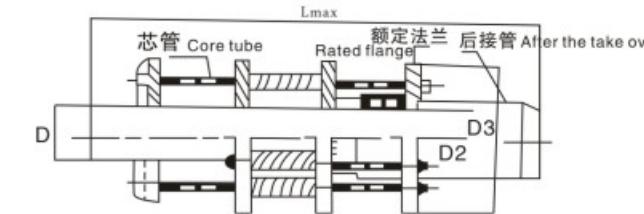

Directly buried internal pressure corrugated compensator is suitable for pipelines with only axial displacement. This product has the ability to compensate transverse displacement and combined axial and transverse displacement. However, because the compensation amount is small, it can only be used as axial compensation to better play its characteristics, longer service life and more safe and reliable.

直埋套筒补偿器

Directly buried sleeve compensator

ZTB-B普通型套筒补偿器, 安装CJ/T3016.2设计制造, 主要用于架空管道的轴向补偿, 也可以用于直埋管道, 吸收温差等引起的管道的轴向伸缩, 广泛用于城镇供暖、冶金、矿山、发电、石油、化工、建筑等行业。

本型补偿器采用成型填料加半固态密封油的符合密封结构, 具有封闭性能好, 耐高温, 抗腐蚀, 可带压堵漏的优点, 可保证管道的长期定期运行。

大拉杆横向型波纹补偿器 Large tie bar transverse ripple compensator

①端板; ②拉杆
③中间管; ④波纹管
⑤球面、锥面垫圈 ⑥端管

使用说明 Instructions

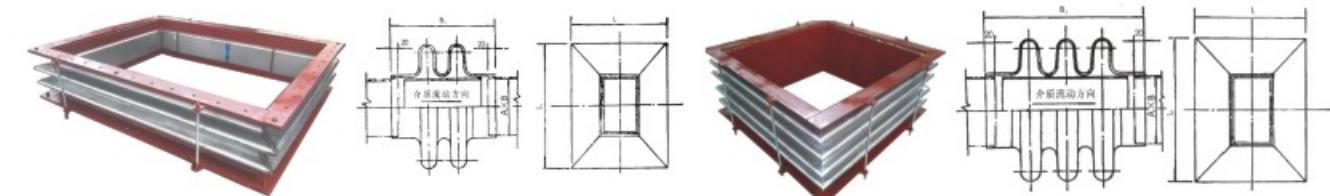

大拉杆横向型波纹补偿器可以补偿弯曲管段的横向位移和量值不大的角位移，通常不用来补偿角位移。该补偿器由接管、二个波纹管以及大拉杆等零件构成。它能吸收管系任意平面内的横向位移。位移球面螺母绕球面垫圈转动，同时拉杆还具有承受内压推力能力。

工作温度≤420℃ 疲劳寿命1500次

The transverse corrugated compensator can compensate for the transverse displacement of the curved pipe and the angular displacement with little value. The compensator is connected with Tube, two corrugated tubes and large draw rod and other components. It can absorb the transverse displacement in any plane. The displacement spherical nut rotates around the spherical washer. Also has the ability to withstand internal pressure thrust. The fatigue life of working temperature are less than 420 1500 times.

FGFB型矩形单波/多波膨胀节 Fibroblast type rectangular single-wave/double-wave expansion joint

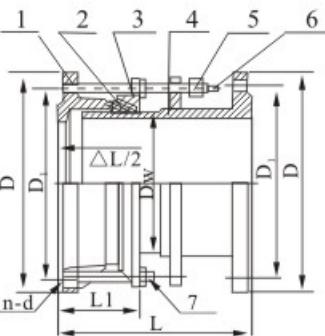

使用温度: -40℃ ~ +420℃ 设计压力: 真空 ~ 0.1Mpa 位移方向: (轴向) 通径: DN300-DN6000mm

用于输送气体或含尘气体,任意矩形,圆形截面的烟气,通风和鼓风机管道,作补偿位移减振用。
It is used for conveying gas or dusty gas, flue gas with arbitrary rectangular or circular cross section, ventilation and blower ducts, for compensating displacement and reducing vibration.

球型补偿器

spherical compensator for thermal expansion

型号No	名称name	数量quantity	材料material
1	球形管Spherical tube	1	ZG230-450, Q235A, 20, QT400-15
2	压盖Gland	1	ZG230-450, Q235A, 20, QT400-15
3	螺栓bolts	n	Q235A, 35, 1Cr8Ni9Ti
4	螺母Nut	n	Q235A, 20, 1Cr8Ni9Ti
5	密封圈Seal ring	2	NBR
6	本体Noumenon	2	ZG230-450, Q235A, 20, QT400-15

性能特点 Performance characteristics

球型补偿器主要适用于地面沉降大、振动大、地形复杂的管道连接，安装在管道上后，球体可以以回转中心在θ角范围内自由转动，来补偿管道因地基沉降、热胀冷缩引起的挠曲。具有补偿量大，占据空间小，流体阻力小，安装方便，综合成本低等优点。

The spherical compensator is mainly suitable for the pipeline connection with large ground settlement, large vibration and complex terrain. When installed on the pipeline, the sphere can rotate freely in the range of theta angle with the center of rotation to compensate the pipeline deflection caused by foundation settlement, thermal expansion and cold contraction. The utility model has the advantages of large compensation amount, small occupying space, small fluid resistance, convenient installation and low comprehensive cost.

XZ免维护旋转补偿器

XZ maintenance free rotating compensator

免维护旋转补、封座外套、柔性石墨填料、螺母螺栓N个压簧组合、填料压盖及弹簧压紧法兰构成：所述填料压紧法兰与压紧上法兰之间设有压簧，压紧法兰纵截面为U型的槽圈。U型槽圈中以及内导管右端面两个定环之间设有与变径管相配合运动的滚珠式滚动环。

Maintenance free rotation compensation, the sealing base coat, flexible graphite packing, nuts and bolts N spring combination, the packing gland and the spring pressing flange form: the pressure spring is provided with the packing gland flange and pressing on the flange between the groove ring type U longitudinal section of a pressing flange. And the reducer pipe is matched with the motion of the ball rolling ring is arranged between the U type groove ring and inner catheter right end surfaces of the two ring.

工作原理：

免维护旋转补偿器和旋转补偿器产品使用都是靠填料腔内的柔性填料进行密封。产品使用过程中每旋转一次填料就会磨损一点，当磨损量达到一定值时，产品就会出现泄漏。免维护旋转补偿器因在填料压紧法兰上方增加了一组弹簧，当填料出现微量磨损时，依靠压紧弹簧的张力给予补偿，从而延长产品发生泄漏时间（泄漏时间延后3-5年）。当磨损量超过弹簧张力补偿量时，只需扳紧弹簧压紧法兰上方的螺帽即可，不需要停气修复，运行无数次限制，不易产生泄漏，从而大大提高供气单位和用气单位的社会经济效益。该产品在0.0Mpa的压力下补偿5000次不产生泄漏，密封效果优越。

免维护式旋转补偿器的密封填料采用目前国内最先进的填料，耐温-60°C—800°C，由于补偿器的内套管外部和外套管内部焊有挡环，两挡环之装设有在减小摩擦力的(滚动环)滚珠，减小了内套管对密封填料的磨损。且由于补偿器装置上多组弹簧的自然张力推着填料压盖法兰，使磨损极为轻微的密封填料永远处于紧凑状态，从而使管道中的液体或气体介质不产生泄漏，当填料磨损量大时，弹簧张力无法满足调整，可用外力对弹簧压紧进行调整从而达到不停止工作状态下达到所要求的密封效果，所以本产品克服了其它同类产品的不足，原有的旋转式、套管式补偿器当填料磨损后无法得到及时补偿调整本免维护式补偿器因为使用了内管和变径管为同径，使介质能够顺通、流畅、解决于上述问题。

The working principle of:

Maintenance free rotating compensator and the rotating compensator product use is to rely on flexible filler packing chamber sealing. Products used in the process of each spin Turn a filler will wear a little, when the wear amount reaches a certain value, the leakage of products will appear. Maintenance free rotating compensator for the packing gland A group of spring to increase the flange above, when the filler had little wear, by the pressing spring tension compensation, so as to prolong the product leak (leak time delay time 3-5 years). When the amount of wear Over the spring tension compensation amount, just pull tension spring clamping flange above the nut can, do not need to stop the gas repair, running unlimited, being not easy to leak, thereby greatly improving the air supply unit and Gas unit of social and economic benefit. This product is 5000 time compensation does not produce leakage under the pressure of 0Mpa, the sealing effect is excellent.

Free sealing filler is currently the most advanced packing aintenance rotary compensator, resistance to temperature of -60 DEG C and 800 C, because the inner casing and the outer casing external internal welding compensator with a baffle ring, the two retaining ring Installed in the decrease of the friction (rolling ring) ball, decreases the inner sleeve on the abrasion of the sealing filler. And because of the natural tension multiple spring compensator device pushes a gland flange, so wear extremely slight sealing filler forever in a compact state, so that the liquid or gas medium in the pipe does not produce leakage, when the filler wear quantity is big, the tension of the spring can not meet the adjustment, available external force on the spring pressure Tight adjusted so as to achieve does not stop working state to achieve the required sealing effect, so the product overcomes the defects of other products of the same type, rotary type, sleeve type compensator original when the packing wear Unable to get timely compensation adjustment of the maintenance free type compensator for the use of the inner pipe and variable diameter pipe for the same size, so that the medium can flow, Shun, to solve the above problem.

D型大挠度松套补偿接头

D-type large deflection loose sleeve compensating joint

D型大挠度松套补偿接头是由短管法兰、本体、压盖、挡圈、限位块、密封装置、压紧构件组成，它采用独特的抗轴力设计，结构简单，密封性能可靠抗拉脱能力强，用于吸收轴向位移和挠度为6-7度的角位移的管道松套连接装置。

D-type large deflection loose sleeve compensating joint is composed of short tube flange, body, cover, retaining ring, limit block, sealing device and compression component. It adopts unique Anti-axial force design, simple structure, reliable sealing performance and strong anti-pull-off ability. It is used to absorb pipeline loose sleeve connecting device with axial displacement and angular displacement of 6-7 degrees deflection.

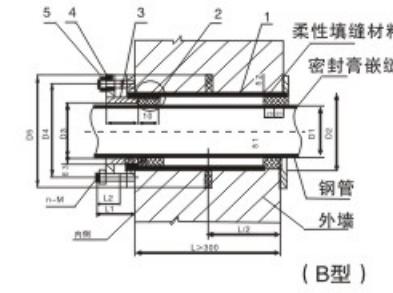

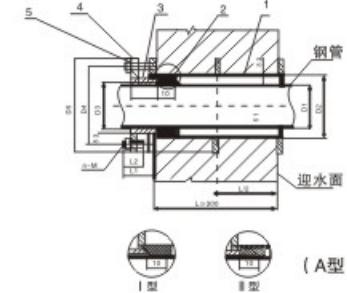

工作压力：0.6-1.6Mpa 位移方向：轴向、角向 通径：DN100-DN3200mm

02S404柔性防水套管

02S404 flexible waterproof sleeve

使用范围 Scope of use

本产品适用于民用、一般工业、市政给排水工程构（建）筑物。

This product is suitable for civil, general industrial and municipal water supply and drainage engineering structures (buildings).

分类应用 Classification application

防水套管结构形式分为柔性防水套管（A/B管型）、刚性防水套管（A/B/C型）及刚性防水翼环三种类型。

柔性防水套管适用于有地震设防要求的地区，管道穿墙处承受振动和管道伸缩变形、或有严密防水要求的构（建）筑物外墙。

I型密封圈适用于一般防水要求，II型适用于比较严密的防水要求。

适用温度：-20℃ ~ 250℃。特殊要求请订货时说明。

当穿墙管与泵或增压设备连接的进、出管道时，宜在连接处设置柔性连接。

Waterproof sleeve structure is divided into three types: flexible waterproof sleeve (A/B tube type), rigid waterproof sleeve (A/B/C type) and rigid waterproof wing ring.

Flexible waterproof sleeve is suitable for areas requiring seismic fortification, where the pipeline passes through the wall to withstand vibration, pipe expansion and deformation, or external walls of structures or buildings requiring strict waterproofing.

Type I seals are suitable for general waterproofing requirements and type II seals are suitable for more strict waterproofing requirements.

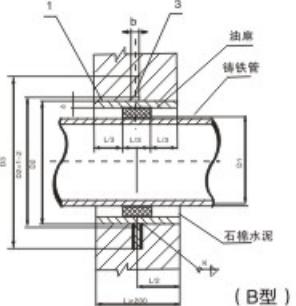

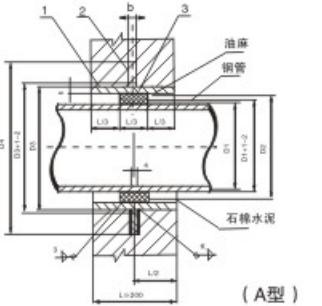

Applicable temperature: -20 ~ 250 C. Special requirements should be specified when ordering.

Flexible connections should be set at the joints when the wall-piercing pipe is connected with the inlet and outlet pipes of pumps or superchargers.

02S404刚性防水套管 02S404 rigid waterproof casing

适用范围 Scope of use

刚性防水套管适用于管道穿墙处不承受管道振动和伸缩变形的构(建)筑物,对于地震设防要求的地区,如采用刚性防水套管,应在进入池壁或建筑物外墙的管道上就近设置柔性连接,A型适用于钢,B型适用于球墨铸铁管。

Rigid waterproof sleeve is suitable for structures (buildings) where pipelines do not bear vibration and expansion deformation of pipelines through walls. For areas requiring seismic fortification, if rigid waterproof sleeve is used, flexible connections should be installed near pipes entering pool walls or building exterior walls. A type is suitable for steel and B type is suitable for ductile iron pipes.

450	476.8	/	530	650	10	14	10	37.85									

说明: 1、套管穿墙处如遇非混凝土墙壁时,应改为混凝土墙壁,其浇注范围应比翼环直径(A型D4或B型D3)大200,而且必须将套管一次浇固于混凝土墙内。套管内的填料应紧密捣实。

2、穿管处混凝土墙厚应不小于200,否则应使土墙壁一边或两边加厚。加厚部分的直径至少为D4+200。

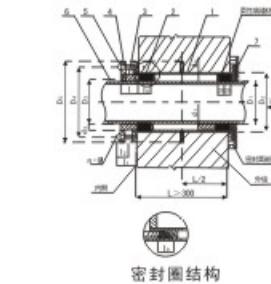

3、焊接结构尺寸公差与形位公差按照JB/T5003.3-1998执行。焊接采用手工电弧焊,焊条型号E4303,牌号J422。焊缝坡口的基本形式与尺寸按照GB985-88执行。

Explanation: 1. When the casing penetrates the wall, it should be replaced by concrete wall. Its casting range should be 200 times larger than the diameter of wing ring (A-D4 or B-D3), and the casing must be fixed in the concrete wall once. Packing in casing should be compactly tampered.

2. The thickness of concrete wall should be no less than 200 at the piercing point, otherwise one or both sides of the earth wall should be thickened. The diameter of the thickening part is at least D4+200.

3. Dimension tolerance and shape tolerance of welded structure shall be carried out in accordance with JB/T5003.3-1998. Welding adopts manual arc welding, electrode type E4303, brand J422. The basic form and size of weld groove shall be carried out in accordance with GB985-88.

04FS02柔性密闭套管 04FS02 Flexible Sealed Casing

序号NO	名称 Name	数量 Number	材料 Material	备注 Remarks
1	法兰套管 Flange casing	1	Q235-A	焊接件 Weldments

5	螺母 Nut	n	Q235-A	GB/T41-2000
6	钢管 Steel pipe		Q235-A	
7	挡板 baffle		Q235-A	

说明:

1、柔性填料材料:沥青麻丝、聚苯乙烯板、聚氯乙烯泡沫塑料板。

2、密封膏:聚硫密封膏、聚氯脂密封膏。

3、穿管处混凝土墙厚不应小于300,否则应使墙壁一边加厚或两边加厚,加厚部分的直径至少为D5±200。

4、钢管和挡板焊接后经镀锌处理,再试行与套管安装。

5、焊接采用手工电弧焊,焊条型号E4303。

Explain:

1. Flexible filler materials: asphalt bast fiber, polystyrene board, polyvinyl chloride foam board.

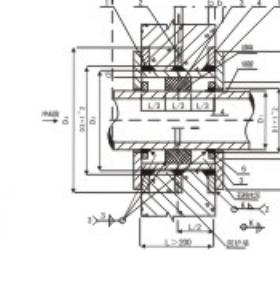

2. Sealing paste: polysulfide sealant and polychloride grease sealant.

3. The thickness of concrete wall should not be less than 300. Otherwise, one side of the wall should be thickened or both sides should be thickened. The diameter of the thickened part should be at least D5+200.

4. The steel pipe and baffle are welded and galvanized, and then the casing is installed on trial.

5. Manual arc welding is used for welding. Electrode type E4303.

07FK02通风套管 07FK02 Ventilation Casing

人防通风密闭套管适用于人防通风工程，是风管穿密闭墙预留套管，其主管采用3mm厚钢板卷制而成，密闭肋采用5mm厚钢板加工制作，焊接采用手工电弧焊，焊缝坡口的基本形式与尺寸按照GB985-88执行。

因为材料在运输或配送过程中，表面可能会有刮花或弄脏，材料在储存过程中也可能会因为表面氧化或而造成表面不够美观，图片和实物也可能有所不同。购买时可以与在线客服联系。因为材料的特殊性，所有材料都是买家付款后才发货的，都是属于专门为买家订做的产品，一经售出，非材质问题，概不退换！敬请谅解。

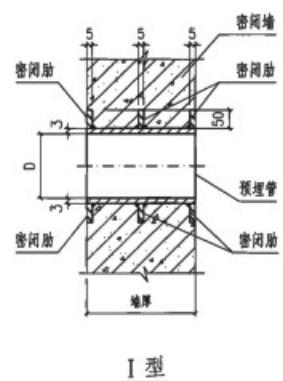

Civil air ventilation airtight sleeve is suitable for civil air ventilation engineering. It is reserved sleeve for air duct passing through airtight wall. Its main pipe is rolled with 3 mm thick steel plate, and the airtight sleeve is 5 mm thick. Steel plate processing, welding using manual arc welding, the basic form and size of weld groove in accordance with GB985-88.

Because the surface of materials may be scratched or dirty in the course of transportation or distribution, and the surface of materials may not be beautiful due to surface oxidation or in the course of storage. Views, pictures and objects may also be different. You can contact online customer service when purchasing. Because of the particularity of materials, all materials are purchased and shipped after payment by the buyer. All of them belong to the products specially made for buyers. Once they are sold, they will not be exchanged for non-material problems. Please forgive me.

注：公称尺寸 DN10~DN40 的法兰使用 PN40 法兰的尺寸；公称尺寸 DN50~DN150 的法兰使用 PN16 法兰的尺寸。

a : 对于铸铁法兰和铜合金法兰，该规格的法兰可能是4个螺栓孔的，因此，当制造厂和用户协商同意后，与铸铁法兰和铜合金法兰配对使用的钢制法兰可以采用4个螺栓孔。

b : 用户可以根据计算确定法兰厚度。

品质承诺 Quality commitment

喜元阀门一贯奉行"以质量赢得用户，以信誉发展企业，以价格占领市场"的经营原则，公司以满足顾客需要为宗旨，愿意通过自己的努力共同促进双方的合作，为顾客提供优质的产品和优良的服务，为确保用户买得放心，用时舒心，喜元阀门实行公开服务承诺。

优质体系

- 1.产品的设计、制造、装配、检验及相关过程严格贯彻ISO9001/14001国际管理体系的标准。
- 2.产品一律按国家和行业有关标准进行设计、制造和检验，同时可以根据用户的要求进行专用产品的开发，满足用户需求。产品的测试范围：规格1~2000mm，压力0.1~32MPa。

售前服务

喜元阀门拥有最全面最专业的技术队伍，可根据用户的要求就产品的类别、结构、性能、技术指标、产品选型等进行技术研讨及交流、非标产品设计、疑难解答及前期技术性常见故障的分析与预测。

售中服务

用心周到的服务与产品技术的不断创新同等重要，优质的产品加上优质的服务，才能真正体现品牌的优勢。在合作过程中，信守合同，保质保量按时供应，随时保持与用户联系沟通。在产品的安装或使用过程中，可免费提供产品的使用性能、安装调试、故障排除及维修等方面的培训与指导。对特殊或定制的专用产品，可指派专业技术人员亲临现场服务。

售后服务

喜元阀门实行完善的用户档案和全程服务制度，每个用户都指派专业的项目经理进行全程免费技术咨询、安装指导、跟踪服务以及相关咨询服务，让用户真正体会到专业化的服务优势。
